

## STEP 1

### **MAESTRO Initiation**

In this step, we will use the MAESTRO pipeline initiation subcommand to configure a working direnctory.

```
MAESTRO scrna-inti -h  
MAESTRO scatac-init -h
```

## STEP 2

### **Sample Initiation**

In the second step, we will use the MAESTRO sample initiation subcommand to configure a sample JSON file.

```
MAESTRO samples-inti -h
```

## STEP 3

### **Running snakemake**

In the last step, we will only need to run the snakemake and wait for the results! But remember to checkout the log files for any errors.

```
snakemake -j 32
```
